# UNIVERSITY of HOUSTON SYSTEM

# PROJECT: QUERY SECURITY REENGINEER

### **TEST PLAN**

Purpose: This document details the background, scope, strategy and approach, focus areas, responsibilities, constraints and risks, scheduling, deliverables, and tools associated with the testing involved in this project.

#### **Revision History**

#### 1. Overview

#### 1.1. Introduction

A significant gap exists in the controlled access to sensitive data available using the PeopleSoft Query tool. This project reengineers the query security architecture to put into place the controls needed to secure sensitive data available utilizing the Query Reporting tool.

Sensitive data has been identified to include data elements Social Security Number and Date of Birth. Along with functional analysts stakeholder consensus, a sponsor decision has been made that SSN/DOB access in the Query Tool will be directly inherited from the Primary Permission list populated on each individual's user profile to facilitate seamless sensitive data control and audit integrity. This project assesses and transforms the security architecture embodying those data elements use in the PS Query tool and impacted integration areas FASF Primary Permissions/Item Types configuration.

Initial discovery and scope of the project identified the Query Tool, SQL Tables/Views, Query Trees, Access Groups, Query Permission lists, Primary Permissions lists (general data security), Query Roles, and Query Users Security Profiles as the areas impacted by transforming access to the sensitive data elements. The CSA/FSA document provides detailed assessment summaries with statistics of these component areas, and provides the major basis for drafting this Test Plan.

Further collaboration during the discovery phase also identified FA/SF Primary Permission lists as needing to be included in the scope of this project because of the dual nature (general system data security coupled with embedded item type security) of those specific primary permissions. The scope of the project has been updated to include the decoupling of data security from embedded item type security in FA/SF primary permission lists. This decision at the highest level impacts functional system configuration SACR → Security → Secure Student Financials → Setup → Security Options. "Origin" and "Item Type" security options will be changed from "Permission List Security" to "User ID Security". No SFA SACR configuration updates have been identified as needing to be changed and are out of scope for this project.

This Test Plan has been created to: aid determining the effort needed to validate the viability and quality of changes made to the system as directed by the scope of this project; guide testing efforts; and communicate the background, scope, strategy and approach, focus areas, responsibilities, constraints and risks, scheduling, deliverables, and tools associated with the testing involved in this project.

Must have functionality is considered more important than the delivery date in this project.

#### 1.2. Scope

Below is the scope of testing that will be performed for the Query Security Reengineer project. It defines the overall testing requirements and provides a high-level view of the project test activities.

#### In Scope:

- Sensitive data has been identified to include data elements: Social Security and Date of Birth. The scope of this project in regards to query security access and impacted primary permissions focuses on those data elements only. All other data elements available through the PS Query tool are out of scope for testing.
- New views, sql swaps, new query trees, query trees updates, new permissions, new roles, user profiles updates, SF SACR Security Options and item type configuration updates, and FA testing of impact resulting from item type configuration updates are in scope for this project.

• Performance testing and regression testing are in scope.

#### **Out of Scope:**

- Specific hardware, middleware, servers, etc. as a test component are out of scope.
- The various other non-Query, non-Security, non-SF, and non-FA functional and PeopleTools areas of the application suite are out of scope for this project.

#### 1.3. Deliverables

The table below details the key deliverables for performing testing for this project.

Deliverable	Milestone/Date
Test Plan	02/01/2016
Test Scripts	03/01/2016
Test Results – Analysts	03/21/2016
Test Results – User Acceptance	TBD
Test Defects/Incident Report – Analysts	03/21/2016
Test Defects/Incident Report – User Acceptance	TBD
Test Summary Report	TBD

### 2. Test Srategy and Approach

#### 2.1. Overall Approach

The testing objectives of this project are to ensure the proper functioning and defect identification impacted by the scope of this project. Testing will be conducted as an iterative process. Very cursory testing will be conducted in the development database to baseline developer deliverables prior to migration for downstream testing; all other major testing will be conducted in the DC2 database which has been earmarked for this project effort; final cursory MTP testing will be conducted in the 9TST database. All costs for this project, including testing costs, are considered as implicit and all phases of testing do not require a new source of funding. Currently there are no additional/new costs to the institution for this project effort as (1) needed skillsets and knowledge from human resources are being leveraged from current institution employees, (2) needed hardware, servers, networks, equipment, and systems are being leveraged from existing institutional assets.

#### 2.2. Test Types

The key types of testing that will be conducted for this project include:

- Functional and unit testing (module navigation, data entry, business rules processing, and retrieval) will focus on operational verification and defect identification within individual modules of the application suite.
- Performance and stress testing will focus on operational verification and defect identification related to response time for Query executions. Caveat: it is a known anomaly that the various database environments produce varying performance profiles; it is assumed performance results will not be the exact same in the production environment as the test environments.
- Security and access control testing, and Configuration testing will focus on operational
  verification and defect identification related to sensitive data elements (as identified by
  the scope of this project), primary permissions, redesigned query tree architecture,
  redesigned query permissions and roles, updated users security profiles, reconfigured
  FA item type security, and reconfigured SA item type security.
- Regression testing will focus on operational verification and defect identification as it relates to loss of functionality due to the various changes made to the current state of query security architecture, current state of SACR Secure Student Financials, and current state of item type configuration.
- User acceptance testing will focus on operational verification and defect identification by business owners and end users to attest to the viability of the system functioning according to business needs; and will serve as a key indicator for MTP execution.

### 2.3. Build Strategy

Existing non production environments are sufficient for all anticipated testing requirements.

#### 2.4. Test Environment

The existing DC2 environment has been earmarked for most of testing to be conducted for this project. Final test migration path will be from the 9TST environment.

#### 2.5. Testing Requirements

General requirements for testing include:

#### 2.5.1. FA Test Requirements

- Testing would be disbursing FA awards:
  - Repacking process looks at changes to award requirements and makes adjustment based on item type award setup
  - Posting award
  - o Adjusting award amount
  - o SFA Item Type Setup
  - SFA Fiscal Setup
- Testers will need access to a web browser with access to the internet
- Testers will need access to the DC2 and 9TST databases
- Testers will need access to the CSS SharePoint site
- Testers may need access to Microsoft Excel

#### 2.5.2. SF Test Requirements

- Cashiering: making payments to students account
- Group Posting Transactions: upload file to post charges to students accounts
- Third Party Contracts: apply student to Third Party Contracts
- Testers will need access to a web browser with access to the internet
- Testers will need access to the DC2 and 9TST databases
- Testers will need access to the CSS SharePoint site
- Testers may need access to Microsoft Excel

#### 2.5.3. Query Test Requirements

- Testers will need access to a web browser with access to the internet
- Testers will need access to the DC2 and 9TST databases
- Appropriate views and sql scripts will need to have been completed in the test environment
- Appropriate query tree updates, query permission lists updates, and query roles updates will need to have been completed in the test environment
- Testers will need access to PS Query, Process Monitor, and have appropriate user security profiles updated (permissions, roles)
- Testers will need access to the CSS SharePoint site
- Testers may need access to Microsoft Excel

#### 2.6. Resources and Skills

The test team for this project includes ES Developers (development iterations), CSS Functional Analysts, and functional Business Owners/ End Users. The test team is responsible for testing the system changes and ensuring the modifications are both viable and meet users' needs.

The types of resources required for successful testing of this project include:

 PeopleSoft/SQL Developer: test development (SQL views and SQL scripts) to be migrated to and executed in test environment

- PeopleSoft FA Functional Analyst: test FA functionality, especially Item Type features, and related security; lead business owner/end user testing
- PeopleSoft SF Functional Analyst: test SF functionality, especially Item Type features, and related security; lead business owner/end user testing
- PeopleSoft Query Functional Analyst: test Query functionality and related security, test views and executed scripts; lead business owner/end user testing
- PeopleSoft FA Business Owners/End Users: verify viability of FA functionality
- PeopleSoft SF Business Owners/End Users: verify viability of SF functionality
- PeopleSoft Student Accounting/GL Owners/End Users: verify viability of GL interface
- PeopleSoft Query Business Owners/End Users: verify viability of Query functionality

#### 2.7. Test Level Responsibility

The table below details the primary (P) and secondary (S) responsibility for performing testing for this project.

Test Level	Developer	Analyst	Business
Pre Test Environment Migration	Р	S	
Unit Testing		Р	
Performance Testing (Query)		Р	S
Security Testing		Р	S
Regression Testing		Р	S
User Acceptance Testing			Р
Production Verification Testing		Р	S

### 2.8. Test Effort (high-level) and Scheduling

Actual scheduling of the test effort will be detailed in the WBS of the Project Plan. Provided below is a high-level summary of anticipated work effort:

Test Effort	Members	Anticipated Effort (in days)				
		FA	SF	Query	Admin	Max
Deliverable – Test Plan	Analysts	2	2	2	7	7
Deliverable – Test Scripts	Analysts	4	4	4	0	4
Deliverable – Test Defects Report	Lead	0	0	0	2	2
Deliverable – Test Summary Rpt	Lead	0	0	0	5	5
Unit Testing	Analysts	7	7	7	0	7
Performance Testing (Query)	Analyst, Business	0	0	5	0	5
Security Testing	Analysts, Business	4	4	4	0	4
Regression Testing (incl. GL interface)	Analysts, Business	4	6	4	0	6
Testing Training Requirements	Analysts, Business	4	4	0	0	4
User Acceptance Testing	Business	10	10	10	0	10

37	36	14	54

### 2.9. Testing Tools

The following tools will be used for testing:

Test Element	Tool
Test Scripts Creation	SharePoint/Excel
Test Scripts Tracking	SharePoint
Test Scripts Execution	PeopleSoft CS/Finance
Test Scripts Management	SharePoint
Defects Tracking	SharePoint
Defects Management	SharePoint
Project Management	MS Project
Test Summaries	MS Word

### 2.10. Data Requirements

The below data setup is required to enable testing to start.

#### 2.10.1. FA Data Requirements

• None identified

#### 2.10.2. SF Data Requirements

None identified

#### 2.10.3. Query Data Requirements

- SSN data populated in new views
- DOB data populated in new views

### 3. Assumptions, Dependencies, Risks/Constraints

#### 3.1. Assumptions

The below key assumptions have been made for testing:

- Although not dedicated resources, a major assumption is that functional and development team members will be sufficiently available to dedicate time to complete this project.
- Functional analyst and development team members will be available to provide support, training and defect resolution to the test team members as required.
- It is a known anomaly that the various database environments produce varying performance profiles; it is assumed performance results will not be the exact same in the production environment as the test environments but performance results in the test environment will be a sufficient baseline for assessing risk to moving the project into the production environment.
- Use of the DC2 database as the chosen environment will be earmarked mostly for this
  project and will not be made available (or greatly limited) for other projects or other
  testing objectives.

#### 3.2. Dependencies

The below key dependencies have been identified for testing:

- Access to the system in the test environment will be appropriately configured for all test team members identified prior to the commencement of iterative testing.
- Access to the test environment will not be impeded in any material way during the ongoing testing required by the project; any downtime (scheduled or unscheduled) will be mitigated.
- Unambiguous test results will be dependent on a dedicated test environment, with conflicts from other test objectives mitigated.

#### 3.3. Risks/Constraints

The below key risks have been identified for testing:

- The DC2 test environment is made available for testing objectives outside the scope of this project.
- There are differences in performance across database environments; a successful baseline performance in the test environment does not guarantee adequate performance in the production environment.
- Additional scope creep needs to be guarded against during the life span of this project.
- A significant constraint exists regarding dedicated resources for the project. All key team
  members provide production support which by its nature takes priority of effort based on
  the severity of the production support event; balancing duties results in increased finish
  dates for project tasks.

### 4. Administrative Plan

## 4.1. Approvals

The below key approvals have been identified for this test plan:

Approval Element	Role	Responsible Person	Escalation Approver
Test Plan Approval	Sponsor	Katina McGhee	None
Scope Change Approval	Sponsor	Katina McGhee	None
User Acceptance Testing MTP	Stakeholders, Sponsor	A CSS Manager	Katina McGhee

### 4.2. Training

The following training requirements have been identified to facilitate testing:

Training Requirement	Staff	Date
SF: Training Requirement 1???	Shane Mills	TBD
FA: No training required for testing	Mark Handy	N/A
Query: No training required for testing	Marie Coleman	N/A

## 5. Definitions

The following acronyms and terms have been used throughout this document:

Term/Acronym	Definition

## 6. References

### **Reengineer of Query Security Architecture**

xRef	Current State Assessment	Future State Assessment
QUER	RY TREES/ACCESS GROUPS:	
1	There are 88 flagged sensitive data records in core custom query tree UHS_SAA_QUERY_TREE; of the 88 records, 38 have been executed in a query since 2014.	Recommend creating new query tree 'UHS_SAA_RESTRICTED'; or alternatively creating new child access group 'UHS_RSTRCTD_DATA_GRP' under existing query tree 'UHS_SAA_QUERY_TREE'. A key advantage of creating a separate tree would potentially be having a cleaner setup (eliminate levels of additional nesting of the records) and succinct maintenance. A significant risk of using a child group setup under the existing core query tree involves instances of permission lists that include the query tree's Root node.  Recommend removing all (88) sensitive data
		recommend removing an (66) sensitive data records from their current parent nodes in the custom query tree; and adding the records executed since 2014 (38) to the newly created restricted query tree/access group.
2	The database includes PeopleSoft delivered SA sample query trees. There are 162 flagged sensitive data records in seven sample delivered query trees that are used in SA query permission lists; of the 162 records, 31 have been executed in a query since 2014.	Recommend removing all (162) sensitive data records from the PS delivered query trees; and adding the records executed since 2014 (31) to the newly created restricted query tree/access group.  Note: Oracle upgrades/bundles can include new record definitions added to their delivered sample query trees; consequently SecAdm should review the upgrades/bundles for additions of records containing sensitive data that should be removed,
3	There are 23 flagged sensitive data records in three non-core custom query trees. The three non-core custom query trees are attached to two permission lists. Both permission lists have attached query tree access groups, but either does not grant access to menu 'Query Manager' and/or does not have any assigned users.	and if appropriate added to the restricted custom query tree/access group.  Recommend SecAdm review the business reason behind having these non-core custom query trees being attached to these permission lists, and whether it is appropriate these non-core custom query trees be removed from the permission lists.
4	The SA database includes query trees, permissions, and roles that are non-SA. There are four HR query trees associated with 57 flagged sensitive data records used in queries (approximately 208). The four trees are used in	Recommend no changes. SA query users currently are not accessing sensitive data records through these query trees. Security Administration will ensure these query trees are not assigned to Campus Solutions query permissions lists.

<u>xRef</u>	Current State Assessment	Future State Assessment
	eight permission lists (HR) and seven roles (HR); assigned to the roles are twenty-two users (HR, Finance, ES).	A follow-up review for a subsequent phase may be useful to determine if removal of the associated tables from the SA database is appropriate or still needs to be retained.

#### **PERMISSION LISTS:**

There are two core SA query permission lists (UHNPCSPTQP01 and 02), having 1500+ assigned users.

The current query permission structure parses user access between two broad categories: query writing access (including all advanced writing features) which has approximately 267 assigned users and query run access which has approximately 1325 assigned users. Users in both categories currently have access to sensitive data in the query tool through the permission lists.

Recommend six separate query permission lists. The new query permission list structure will entail meeting the below security and functional key objectives:

- Separating out and securing Restricted Data (sensitive data).
- Controlling and limiting creation of public queries; and mitigating the proliferation of unintended data result sets.
- Controlling and limiting poorly constructed query definitions because of improper use of advanced query features; which will also mitigate proliferation of unintended data result sets, and mitigate database performance issues.

The new structure would resemble the below query permission list architecture:

- 1. Query Basic Restricted Data
- 2. Query Adv Restricted Data
- 3. Query Run Restricted Data
- 4. Query Basic-Unrestricted Data
- 5. Query Adv-Unrestricted Data
- 6. Query Run-Unrestricted Data
- The 'Basic' restricted and unrestricted permission lists will have characteristics: Private Query Create only, Allow Distinct, No Joins, No Subqueries, No Unions, No Expressions.
- The 'Advanced' restricted and unrestricted permission lists will have characteristics: Public/Private Query Create, Allow Distinct, Allow Joins, Allow Subqueries, Allow Unions, Allow Expressions.
- The 'Restricted Data' permission lists will include query tree access groups populated with sensitive data records.
- The 'Unrestricted Data' permission lists will not include any query tree access groups containing records with sensitive data.

xRef	Current State Assessment	Future State Assessment
6	Both core SA query permission lists also include	SecAdm will ensure Root nodes are appropriately
	occurrences of attached Root node query access	attached to permission lists; Root nodes should
	groups as well as attached child access groups	not be attached to permission lists if the query

	data in the query tool through attached	respective AVPS suggested reassignifient query
	permission lists.	access and the AVPS then provide final approvals

xRef	Current State Assessment	Future State Assessment
	The core UHCL SA query roles references more than just query permissions, they also grant access to various other menu components. In regards to query access, these core UHCL query roles are redundant to the core UHS query roles.	Given the old query roles mixes query permissions with access to non-query menu components, SecAdm may also want to review if the existing role definition (name/description) should be changed.
11	There are six non-core SA query roles having less than 15 assigned users.  Two are UHCL non-core query roles that grant query access as well as access to various other processes, approximately 10 users are assigned.  One is a UHM non-core query role that grants access to query as well as various other processes.  Three are UHS non-core query roles that only grant access to query.	Recommend the old query roles have the current query permission lists removed; and all query roles streamlined at the system level, UHCL and UHM no longer having separate query roles.  Users currently assigned to the old roles will be reviewed for reassignment in the new UHS query roles. A list of users needing reassignment review will be provided to campuses. Recommend campus query business owners provide their respective AVPs suggested reassignment query access and the AVPS then provide final approvals of reassignments.  For the old query roles that mix query permissions with access to non-query menu components, SecAdm may also want to review if the existing role definition (name/description) should be changed.
TABLI	ES/VIEWS:	
12	There are 189 records flagged as sensitive data records referenced in a query definition in the SA database; and of the 189 records, 83 are flagged as being executed since 2014. The 83 records showing execution since 2014 include 21 SQL View record definition types and 62 SQL Table record definition types.	Contingent upon ES technical review, recommend new views be created for the source sensitive data records that mask relevant fields. Recommend that both SSN and DOB type fields be masked to last four digits.  Recommend new views created having the masked sensitive data fields be added to a new child query access group (such as 'UHS_MASKED_VIEWS') under existing query tree 'UHS_SAA_QUERY_TREE'; the new child query access group would need to be added to appropriate Unrestricted Data query permissions.
QUER	RIES:	
13	There are approximately 3869 query definitions in the database that reference a flagged sensitive data record. Of the 3869 queries, 1623 show as being executed since 2014. The 1623 queries include 537 Public query definitions and 1086 Private query definitions.	Recommend public queries having a flagged sensitive data record that have been executed since 2014 will have a duplicate query created with variant query name ending in '_V2(n)'; the query duplicate will then have component views swapped for original source records.  Recommend all other public queries having a

xRef	Current State Assessment	Future State Assessment
		flagged sensitive data record will have component views swapped for original source records, and a duplicate query will not be created.
		Recommend private queries owned by users approved for Restricted Data access have no changes made.
		Recommend that private queries owned by users not approved for Restricted Data access will have flagged sensitive data records swapped for component views.
OTHE	R PS PROCESSES:	
14	Equation Engine, Crystal Reports, SQRs.	Should not be impacted; don't think these tools processes reference query trees/access groups, permissions or roles for successful processing

<sup>\*</sup>Major assumption: Given formal query policy has not been agreed upon/approved, the FSA query security architecture assumes a continued largely decentralized query granting and writing business process.

xRef	Current State Assessment	Future State Assessment
QUE	RY TREES/ACCESS GROUPS:	
1	There are 88 flagged sensitive data records in core custom query tree UHS_SAA_QUERY_TREE; of the 88 records, 38 have been executed in a query since 2014.	Recommend reating new query tree 'UHS_SAA_RESTRICTED'; or alternatively creating new child access group 'UHS_RSTRCTD_DATA_GRP' under existing query tree 'UHS_SAA_QUERY_TREE'. A key advantage of creating a separate tree would potentially be having a cleaner setup (eliminate levels of additional nesting of the records) and succinct maintenance. A significant risk of using a child group setup under the existing core query tree involves instances of permission lists that include the query tree's Root node.  Recommend removing all (88) sensitive data records from their current parent nodes in the custom query tree; and adding the records executed since 2014 (38) to the newly created restricted query tree/access group.
	88 records	pstreenode_Custom!AE1
-	38 executed	pstreenode Custom!AH1
	The database includes PeopleSoft delivered SA sample query trees.  There are 162 flagged sensitive data records in seven sample delivered query trees that are used in SA query permission lists; of the 162 records, 31 have been executed in a query since 2014.	Recommend removing all (162) sensitive data records from the PS delivered query trees; and adding the records executed since 2014 (31) to the newly created restricted query tree/access group.
2		Note: Oracle upgrades/bundles can include new record definitions added to their delivered query trees; consequently SecAdm should review the upgrades/bundles for additions of records containing sensitive data that should be removed, and if appropriate added to the restricted

# **Primary Permission List:**

- 1) Primary permission list is assigned directly to users on user profile page.
- 2) It mostly controls access to view SSN/DOB on search screens / pages with SSN/DOB.

- 3) PPL is also heavily used for item type security and other SF/FA security.
  - a) These PPL's include:

Primary Permission List	name	National ID	Birthdate	Currently used?	how many users?

# SF/FA Set up

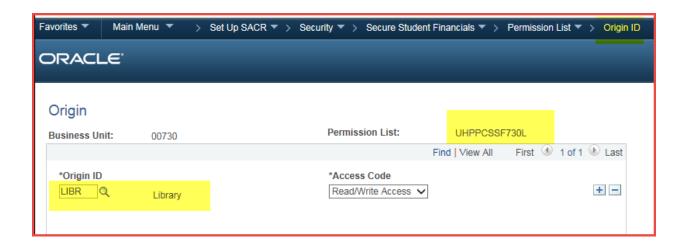

- 1) SetId, Business Unit, Credit Card/Check, company, Institution Set, Origin, Item Type security for SF and FA can either be driven by Primary Permission List or User ID.
  - a) To assign item types to PPL (which then is assigned to user) navigate to Set up SACR > Security > Secure Student Financials > Permission List > Item Type. In the example below, PPL UHPPCSSF759B has access to all Item types in the tree node "HCL". So users with this PPL will have access to post charges, for example, for all items types in the tree node "UHCL"

Take for another example, UHPPCSSF730L. This PPL has access to all items types in Tree node "28-LIB-LIBRARY" as well as access to item types "197096000000" and "199999991030"

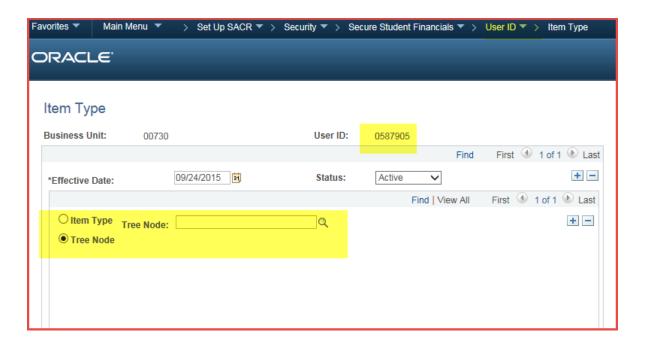

b) To assign Origin ID to PPL (which is then assigned to user), navigate to Set up SACR > Security > Secure Student Financials > Permission List > Origin ID. In the example below, PPL UHPPCSSF730L has access to the Origin ID "LIBR"

c) As seen above, SetId, Business Unit, Credit Card/Check, company, Institution Set, Origin, Item Type security can be assigned to PPL. It can also be assigned directly to a user. The same way it is set up for PPL, it can be done for user ID.

d) Because SetId, Business Unit, Credit Card/Check, company, Institution Set, Origin, Item Type security can be assigned to PPL or User ID, set up must be done to determine whether PPL or User ID is the driver for those fields. This set up is done:

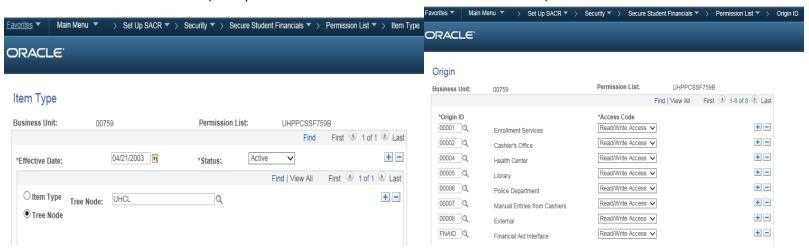

This means that currently, Primary Permission List is the driver for SetID, Credit Card/ Check, Company, institution set, Origin, Item Type. This means Users get access to item types, etc. through PPL.

# Future plan/Testing

1) PPL 's should not have access to item types. Because PPL's control display of SSN/DOB as well as control SF/FA security such as item types, inconsistencies are crated in regards to what user see on a page and what they can see in a query regarding sensitive data.

- 2) The plan is to move SF/FA security from PPL to user id. This means users get access to Origin Id, item types, etc directly through User ID set up as opposed to Primary Permission List.
- 3) Discontinue use of SF/FA PPLs
  - a) For example, UHPPCSSF759B has access to item type tree node "UHCL" and 8 Origin IDs. With this change, the set up on PPL must be done at the User level (Set up SACR > Secure Student Financials > User Id >).

- b) Benefits: Users get access to Item types that they may need, with relation to display of SSN/DOB, instead of creating new Primary permission list to tailor to individual needs. For example, PPL for Library has access to 3 item types and gives full access to SSN/DOB. A user needs access to those 3 item types but no access to SSN/DOB. A new PPL would have to be created and set up for just this one user.
- 4) General Testing plan
  - a) Choose testers
  - b) In non-prd environment, assign item types, origin ID, etc to user id. Assign testers non-SF/FA PPLs.
    - i) Set up SACR > Secure Student Financials > User Id >).
    - ii) Note: some set up from SF/FA PPL can be transferred to non-SF/FA PPL such as Institution set. This means Institution set will not have to be set up for all users- they will get access through PPL.

- c) Change set up security options from PPL to User ID
  - i) Set up SACR > Secure Student Financials > set up > security options
- d) Have Brian comment out his Reversal mod (his mod ensures users have access to reverse charges they have access to post. Peoplesoft delivers similar functionality)
- e) Test reports:
  - i) Receipts by Business Date
  - ii) Outstanding Receivable
  - iii) Item type Summary
- f) test Queries:
  - i) UHCL\_RBBD\_WEB\_CCRD
  - ii) UHCL\_RBBD\_WEB\_ECHCK
  - iii) UHCL\_APPL\_FEE\_CC\_DATE
- g) Test pages:
  - i) Student financials > charges and payments > group processing > create group data entries
  - ii) Student financials > charges and payments > post student transaction
  - iii) Student financials > refunds > student refunds
  - iv) Financial Aid > awards > award processing > assign awards to a student
  - v) Financial aid > awards >awards processing > invoke professional judgement
  - vi) Student financials > charges and payments > validate table
  - vii) Student financials > charges and payments > apply payment
  - viii) Student financials > charges and payments > reversals > reverse charge

# **Agenda**

## **Attendees**

M Coleman

C Hampton

G King

K McGhee

J Saeed

## **Discussion**

1. Update

See also: Meeting Summary

- 2. Open Action Items
- 3. Next Steps

### **Notes**

## 2015-12-07

## **Meeting Summary**

- Update
  - Leo completed shell for swap record/view in query definition; Josef/Leo/Marie to have technical meeting
     @ 12/11
  - DC2 database earmarked for testing
  - Shane/Mark/Marie to meet for Test Plan and Test Scripts @ 12/14
- Next Steps
  - Agree on Swap script
  - Josef begin actual development
  - Agree on Test Plans and Test Scripts
  - Leo/Khalid agree on additional scripts and associated resource
  - Update and agree on project plan

### **Next Steps**

See also: Meeting Summary

## **Previous sessions**

2015-12-07

- Update
  - Josef/Leo/Marie: cursory tested view; developing shell for swap script (@ 20%)
  - James/Shane: discuss with UHC/UHV SF folks on if they have any concerns with switching item type security
    - 9/22/15 meeting w/ users included user concerns. A follow-up meeting was proposed in which Marie will attend --> follow-up meeting @ 10/15/2015.
      - Below were the concerns and response from James/Shane addressing the concerns:
        - 1. UHCL & UHV too many Item to assign to a user
          - a. Security recommended to add the entire tree node to the user
        - 2. UHCL When reconciling direct loan they need to see SSN
          - a. This is not related to this PPL project
        - 3. UHCL- To view Item Types they use 00797 and to view students account they use 00759.
          - a. These Set IDs can be assigned to non-SF/FA PPLs
        - 4. UHM Business unit and viewing student account
          - a. Currently business unit is not driven by PPL or user ID in the set up
  - Charita: research impact of changing item type primary permission list to FA functionality
- Next Steps
  - SF UHCL/UHV impact follow-up
  - FA impact follow-up
  - Swap script shell
- Closed key discussions:
  - Meetings to move to biweekly; Charita/Gayle/Katina optional

- Users w/out full access will not be able to run queries that use SSN/DOB as prompts or expressions: consensus the user will need to get someone having the access to run the query
- New discovery discussion: primary permission list masking of birthday masks YYYY, so using PPL means users would only see MM/DD for those having partial access
  - if what is displayed for a user is year via page access, that is what the user should see in query (keep it consistent); the user can always request with a business justification an update to security access to full year
- Leo/Marie met with Khalid/Khan/Josef/Colton
  - Josef will be the primary for creation of views
  - Josef to test creating one view per the demonstration in the meeting
- Some primary primary permission lists have a cross-functional (SF-Item Type/SSN) design
  - Currently approx 30 primary permissions are dual in nature
  - it is currently unknown what the business reason was for creating building SF/Item Type security into the primary permissions versus using the alternate Item Type security setup configuration
  - Group consensus: it is cleaner and more desirable to separate SF/Item Type security from primary permission lists.
  - Javaria/James/SF business owner will perform cursory testing on using Item Type security configuration setup separated from primary permissions
  - Reverse charges custom modification
    - uses Primary perm to control users access to item types to be reversed
    - Feedback from Brian:
    - Brian provided info on his mod. It grays out Reverse button except if you have primary permission list with item type tied to primary permission list.
    - he commented out the peoplecode in sadev for me to test.
    - When switching item type set up from PPL to User ID AND removal of Brian's mod, users have access to reverse ANY charge.
    - SF will not want this.
    - to get around this, we must choose Charge Reversal on set up page so users can only
      reverse charges they can assign. Downside is, they will only be able to view the charges
      they can assign/reverse in account details in Charge reversals as opposed to all account
      details.
    - Next Steps:
      - ask Brandon why the Charge Reversal wasn't used for Primary List Security Item type set up.
      - Testing in 100% completed.
      - Brandon did some charge reversal testing without Brian's mod. He provided proof of concept in regards to user id item type security and Charge reversal set up. They did not know of this functionality or perhaps it came in later.
        - perform more testing such as group reversal, payment reversals, writeoff reversals, etc...COMPLETED

#### 2015-09-28

- Update
  - Josef/Leo/Marie: cursory tested view; developing shell for swap script
  - James/Shane: discuss with UHC/UHV SF folks on if they have any concerns with switching item type security
    - 9/22/15 meeting w/ users included user concerns. A follow-up meeting was proposed in which Marie will attend.
      - Below were the concerns and response from James/Shane addressing the concerns:
        - 1. UHCL & UHV too many Item to assign to a user
          - a. Security recommended to add the entire tree node to the user
        - 2. UHCL When reconciling direct loan they need to see SSN

          - a. These Set IDs can be assigned to non-SF/FA PPLs
        - 4. UHM Business unit and viewing student account
        - a. Currently business unit is not driven by PPL or user ID in the set up
  - Charita: research impact of changing item type primary permission list to FA functionality
- Next Steps

- SF UHCL/UHV impact follow-up
- FA impact follow-up
  - Swap script shell

2015-08-31

### Meeting Summary

- Update
  - Josef: to put test view in sa9sbx2
  - James/Shane: discuss with UHC/UHV SF folks on if they have any concerns with switching item type security
  - Charita: research impact of changing item type primary permission list to FA functionality
  - Marie: consolidating query users information for discussion with Cynthia and Trudy
- Next Steps
  - UHCL/UHV follow-up
  - Josef to test creating one view per the demonstration in the meeting
  - Draft project plan
  - SF UHCL/UHV impact follow-up
  - FA impact follow-up

#### 2015-08-24

- Update
  - New discovery discussion: primary permission list masking of birthday masks YYYY, so using PPL means users would only see MM/DD for those having partial access
  - Leo/Marie met with Khalid/Khan/Josef/Colton
    - Josef will be the primary for creation of views
    - Josef to test creating one view per the demonstration in the meeting
    - Josef to put test view in sa9sbx
  - Some primary primary permission lists have a cross-functional (SF-Item Type/SSN) design
    - Currently approx 30 primary permissions are dual in nature
    - it is currently unknown what the business reason was for creating building SF/Item Type security into the primary permissions versus using the alternate Item Type security setup configuration
    - Group consensus: it is cleaner and more desirable to separate SF/Item Type security from primary permission lists.
    - Javaria/James/SF business owner will perform cursory testing on using Item Type security configuration setup separated from primary permissions
      - Testing is ongoing
        - 90% is complete
      - Reverse charges custom modification
        - uses Primary perm to control users access to item types to be reversed
        - No longer an issue/failure...delivered functionality works
      - Next Steps:
        - ask Brandon why the Charge Reversal wasn't used for Primary List Security Item type set up.
          - Testing in 100% completed.
          - Brandon did some charge reversal testing without Brian's mod. He
            provided proof of concept in regards to user id item type security and
            Charge reversal set up. They did not know of this functionality or
            perhaps it came in later.
          - -just to be safe, I emailed UHC/UHV SF folks on if they have any concerns with switching item type security.
        - perform more testing such as group reversal, payment reversals, writeoff reversals, etc...COMPLETED
    - Marie: consolidating query users information for discussion with Cynthia and Trudy
  - Open action items
    - Action Items
      - Test if including Primary Security permission in the view logic appropriately masks data
      - <u>Javaria/James/SF business owner will perform cursory testing on using Item Type security configuration setup separated from primary permissions</u>
  - Next Steps
    - UHCL/UHV follow-up

- Josef to test creating one view per the demonstration in the meeting
- Draft project plan
  - SF impact follow-up

## 2015-08-17

#### **Meeting Summary**

- Update
  - New discovery discussion: primary permission list masking of birthday masks YYYY, so using PPL means users would only see MM/DD for those having partial access
  - Leo/Marie met with Khalid/Khan/Josef/Colton
    - Josef will be the primary for creation of views
    - Josef to test creating one view per the demonstration in the meeting
  - Some primary primary permission lists have a cross-functional (SF-Item Type/SSN) design
    - Currently approx 30 primary permissions are dual in nature
    - it is currently unknown what the business reason was for creating building SF/Item Type security into the primary permissions versus using the alternate Item Type security setup configuration
    - Group consensus: it is cleaner and more desirable to separate SF/Item Type security from primary permission lists.
    - Javaria/James/SF business owner will perform cursory testing on using Item Type security configuration setup separated from primary permissions
      - Testing is ongoing
        - 90% is complete
      - Reverse charges custom modification
        - uses Primary perm to control users access to item types to be reversed
        - No longer an issue/failure...delivered functionality works
      - Next Steps:
        - ask Brandon why the Charge Reversal wasn't used for Primary List Security Item type set up.
          - Testing in 100% completed.
          - Brandon did some charge reversal testing without Brian's mod. He
            provided proof of concept in regards to user id item type security
            and Charge reversal set up. They did not know of this functionality
            or perhaps it came in later.
          - -just to be safe, I emailed UHC/UHV SF folks on if they have any concerns with switching item type security.
        - perform more testing such as group reversal, payment reversals, writeoff reversals, etc...COMPLETED
    - Marie: consolidating query users information for discussion with Cynthia and Trudy
- Open action items
  - Action Items
    - Test if including Primary Security permission in the view logic appropriately masks data
    - <u>Javaria/James/SF business owner will perform cursory testing on using Item Type security configuration setup separated from primary permissions</u>
- Next Steps
  - UHCL/UHV follow-up
  - Josef to test creating one view per the demonstration in the meeting
  - Draft project plan
  - SF impact follow-up

#### 2015-08-10

- Update
  - Leo/Marie met to work through view proof of concept
  - appears viable
  - will meet with Khalid and Khan
  - Some primary primary permission lists have a cross-functional (SF-Item Type/SSN) design
    - Currently approx 30 primary permissions are dual in nature
    - it is currently unknown what the business reason was for creating building SF/Item Type security into the primary permissions versus using the alternate Item Type security setup configuration

- Group consensus: it is cleaner and more desirable to separate SF/Item Type security from primary permission lists.
- Javaria/James/SF business owner will perform cursory testing on using Item Type security configuration setup separated from primary permissions
  - Testing is ongoing
    - 90% is complete
  - Current/Open Failures:
    - Reverse charges custom modification
      - uses Primary perm to control users access to item types to be reversed
      - Feedback from Brian:
        - Brian provided info on his mod. It grays out Reverse button except if you have primary permission list with item type tied to primary permission list.
        - he commented out the peoplecode in sadev for me to test.
        - When switching item type set up from PPL to User ID AND removal of Brian's mod, users have access to reverse ANY charge.
          - SF will not want this.
          - to get around this, we must choose Charge Reversal on set up page so users can only reverse charges they can assign.
             Downside is, they will only be able to view the charges they can assign/reverse in account details in Charge reversals as opposed to all account details.

#### Next Steps:

- ask Brandon why the Charge Reversal wasn't used for Primary List Security Item type set up.
- perform more testing such as group reversal, payment reversals, writeoff reversals, etc
- Marie: consolidating query users information for discussion with Cynthia and Trudy
- Open action items
  - Action Items
    - Test if including Primary Security permission in the view logic appropriately masks data
    - Javaria/James/SF business owner will perform cursory testing on using Item Type security configuration setup separated from primary permissions
- Next Steps
  - UHCL/UHV follow-up
  - Leo and Marie meet with Khalid/Khan
  - Draft project plan
  - SF impact follow-up

#### 2015-08-03

- Update
  - Leo still working on view proof of concept
  - last discussion, view not working as expected
  - will meet to look at what's currently in development dbase
  - Some primary primary permission lists have a cross-functional (SF-Item Type/SSN) design
    - Currently approx 30 primary permissions are dual in nature
    - it is currently unknown what the business reason was for creating building SF/Item Type security into the primary permissions versus using the alternate Item Type security setup configuration
    - Group consensus: it is cleaner and more desirable to separate SF/Item Type security from primary permission lists.
    - Javaria/James/SF business owner will perform cursory testing on using Item Type security configuration setup separated from primary permissions
      - · Testing is ongoing
        - what percentage is complete/remains??????
      - Current/Open Failures:
        - Reverse charges custom modification
          - uses Primary perm to control users access to item types to be reversed
          - Is being researched...waiting on feedback from Brian and Leo

- Marie: consolidating query users information for discussion with Cynthia and Trudy
- Open action items
  - Action Items
    - Test if including Primary Security permission in the view logic appropriately masks data
    - <u>Javaria/James/SF business owner will perform cursory testing on using Item Type security</u>
       configuration setup separated from primary permissions
- Next Steps
  - Draft project plan
  - SF impact follow-up
    - Need cursory testing percentage complete/remaining

2015-07-27...MEETING CANCELED 2015-07-20...MEETING CANCELED 2015-07-13

## **Meeting Summary**

- Update
  - Leo still working on view proof of concept
  - Some primary primary permission lists have a cross-functional (SF-Item Type/SSN) design
    - Currently approx 30 primary permissions are dual in nature
    - it is currently unknown what the business reason was for creating building SF/Item Type security into the primary permissions versus using the alternate Item Type security setup configuration
    - Group consensus: it is cleaner and more desirable to separate SF/Item Type security from primary permission lists.
    - Javaria/James/SF business owner will perform cursory testing on using Item Type security configuration setup separated from primary permissions
    - Marie: provide volume of users with a dual SF-Item Type/SSN primary perm cross-referenced with query access users

• Done: 207 users

- Resource technical effort
  - Tentative: Khalid and Leo have agreed (tentatively) that Colton will probably be the developer and Khan Nguyen will probably be the GA resource
- Open action items
  - Action Items
    - Agree on Scope
    - Test if including Primary Security permission in the view logic appropriately masks data
    - Perform second group review of CSA/FSA
    - <u>Javaria/James/SF business owner will perform cursory testing on using Item Type security</u> configuration setup separated from primary permissions

2015-07-06...MEETING CANCELED 2015-06-29

- Update
  - Leo plans to get back to testing prim perm list based views the week of the 29th
  - Feedback on additional considerations related to changing a users Primary perm list:
    - If I understand the project right, then we will not be changing the users primary permission list. We will be using their existing PPL to grant them query access. This should not have any negative impact on their non-query access
  - Feedback on additional details from Khalid regarding Dave/Coltons transition:
    - Khalid said that reporting developer should be the one to work on this development, maybe the same developer who worked on DB split query project
  - Some primary primary permission lists have a cross-functional (SF-Item Type/SSN) design
    - Currently approx 30 primary permissions are dual in nature
    - it is currently unknown what the business reason was for creating building SF/Item Type security into the primary permissions versus using the alternate Item Type security setup configuration
    - Group consensus: it is cleaner and more desirable to separate SF/Item Type security from primary permission lists.
    - Javaria/James/SF business owner will perform cursory testing on using Item Type security configuration setup separated from primary permissions

- Scope agreement
  - Group consensus: users' primary permissions will be used as basis for sensitive data access in the query tool
  - The proposed FSA new Access Groups will be used for the redesigned architecture
  - Agreement on the other segments of the scope is pending
- Open action items
  - Action Items
    - Agree on Scope
    - Sponsor Decision on Technical Recommendation: the views should be based on Primary Security permission
    - Sponsor Decision on Technical Manager/Development Resources
    - Test if including Primary Security permission in the view logic appropriately masks data
- Next Steps
  - Perform second group review of CSA/FSA in effort to finalize scope
  - Marie: provide volume of users with a dual SF-Item Type/SSN primary perm cross-referenced with query access users
    - Done: 207 users
  - Javaria/James/SF business owner will perform cursory testing on using Item Type security configuration setup separated from primary permissions
  - Resource technical effort

## 2015-06-22

## **Meeting Summary**

- Update
  - Leo is still okay with being the technical manager and providing supervision to Colton for the project
  - •
- Open action items
  - Action Items
    - Agree on Scope
    - Sponsor Decision on Technical Recommendation: the views should be based on Primary Security permission
    - Sponsor Decision on Technical Manager/Development Resources
    - Test if including Primary Security permission in the view logic appropriately masks data
    - <u>Identification of additional SecAdm considerations related to changing a users Primary</u>

      <u>Permission List</u>
    - Follow-up w/ Khalid on details of Dave's transition
    - Follow-up with Leo if he is okay with and would it be reasonable having Colton under his leadership in place of Dave
- Next Steps
  - Email Javaria to provide for next meeting update on (1) identifying additional considerations related to changing a user's Primary perm list and (2) getting details from Khalid regarding Dave/Colton's transition
  - Next meeting perform second group review of CSA/FSA in effort to finalize scope

#### 2015-06-15...MEETING CANCELED

#### 2015-06-08

- Update
  - Technical high-level review/feedback meeting w/ Leo: completed
    - Meeting Summary
- Review of user ssn primary perm list: ongoing
- Open action items
  - Action Items
  - Agree on Scope
  - Sponsor Decision on Technical Recommendation: the views should be based on Primary Security permission
  - Sponsor Decision on Technical Manager/Development Resources
  - Test if including Primary Security permission in the view logic appropriately masks data
- Dave transitioning security responsibilities to Colton
  - Possibly Colton would be used as the developer resource for the project in place of Dave

- Next Steps
  - Javaria to follow-up w/ Khalid on details of Dave's transition
  - Javaria to identify additional secadm considerations related to changing a user's Primary Perm list
  - Marie follow-up with Leo if he is okay with having Colton under his leadership in place of Dave
    - Colton does not have same experience as Dave w/ query tables, query SQLs, CSR objects....

#### 2015-06-03

### **Meeting Summary**

- Technical recommendation made that the views be based on Primary Security permission
  - Possibility the views can reference the primary security permission and perform the work of allowing full data or allowing masked data (even if does not work, recommends matching query access with primary security permission
- Leo ok w/ remaining as tech manager (familiar with the scope of technical work needed, has experience
  with working on subject); agrees with Dave as developer (Leo has worked with Dave before); agrees with
  grad student as resource for creation of views
  - 20 dedicated hours estimate for creation of views (possible grad student resource)
  - 80 dedicated hours estimate for SQLs/CSR (possible Dave resource)
- Requirements/scope are technically reasonable
- Agrees other processes (equation engine, crystal reports, sqrs) should not be impacted

#### **Next Steps**

a. Test view having primary security permission in logic

#### 2015-06-01

#### **Meeting Summary**

- Update
- Marie sent Javaria secadm review lists per previous meeting discussion
- Javaria sent Marie list of users and their primary perm per previous meeting discussion
- FSA xref item 1: secadm ok with doing all 88 records at one time
- Topic: Ideas on way to assess the group of people needing full SSN/DOB
- Users make a case to SR they need the access

#### **Next Steps**

- Meet w/ Leo (technical high-level review and feedback)
- Agree on Scope

## 2015-05-21

#### **Meeting Summary**

- Review of Current State Assessment/Future State Assessment
- FSA xref item 2:
  - Other Recommendation from Javaria: secadm clone the delivered trees and remove sensitive data records from the clones. Then the clones will be used on the query permission lists instead of the delivered trees.
    - would provide flexibility of time for secadm for future bundles/upgrades to not be constrained on time performing review of tables having ssn that would need to be removed prior to being installed into production
  - Divided opinion on whether Basic Query perms should allow 'Joins' access
  - Need to further brainstorm on way to assess the group of users needing full SSN/DOB

#### **Next Steps**

- Meet w/ Leo (technical high-level review and feedback)
- Set up weekly recurring meeting
- Agree on Scope

## **Action Items**

# **2015-05-21**

- Set up weekly recurring meeting
- Marie provide list of review items to SecAdm
- Javaria provide list of users SSN primary permision list
- ☑ Ideas on way to assess the group of people needing full SSN/DOB
  - Users make a case to SR they need the access
- Meet w/ Leo (technical high-level review and feedback)
- Agree on Scope
